

Microblading After Care

Post-Care Ointment

- Apply a post-care ointment (A&D ointment, grape seed oil, coconut oil, etc.) with a cotton swab, make sure your hands are completely clean.
- Apply the ointment once at night time, be sure to use it sparingly as the skin needs to heal itself.
- Continue applying the ointment for seven days.

What to Avoid? (14 Days)

- Practicing sports or activities which produce excessive sweating.
- Sleeping on your sides (48 hours after treatment).
- Swimming, hot sauna, hot bath, Jacuzzi.
- Sun tanning or salon tanning.
- UV/UVA rays or chemicals as they have been known to cause a shift in color.
- Laser or chemical treatments, peelings, any creams containing Retin-A or Glycolic Acid on the face or neck.
- Picking, rubbing, peeling or scratching the area – especially important to avoid scarring and/or removing the pigment.
- Heavy household cleaning tasks where there is a lot of airborne debris.
- Drinking alcohol in excess, it may lead to slower healing.
- Driving in open air vehicles such as convertibles, boats, bicycles, motorcycles, etc.
- Touching the eyebrow area, except when rinsing and applying the post-care cream with a cotton swab.

Rinsing/Showering

- Wash your face carefully around the eyebrow without getting water on the treated area.
- During the shower, keep your face away from the showerhead or take a bath.

What to Expect After your Microblading Session

- REMEMBER THIS TREATMENT TAKES TWO STEPS TO BE COMPLETED, 80% OF PATIENTS REQUIRE A TOUCHUP SESSION TO SEE THE PROPER RESULTS.
- Itching and flaking may appear during the first seven days post-treatment.
- The entire healing process will take from four-six weeks, depending on your body regeneration, age and post-care.
- The pigment will appear very natural after the procedure but much darker the next day.
- After the recovery period (peeling), brows might appear lighter than original. Often even with proper care, patients may develop bald spots or lose original hair strokes which can make brows look uneven. That is the reason why most patients need a touchup session.
- The final look of your brows will be approximately 30 days after the procedure.
- Once completely healed, always apply a layer of sunscreen SPF 30-50 on your eyebrows when exposed to the sun, as sun rays cause pigment to fade quicker.
- If foundation covers healed brows they will appear to be lighter.
- If you have any unexpected problems, please contact Drops of Beauty immediately to discuss further instructions with a healthcare professional.
